Located primarily above dock doors and chokepoints, BOWE IQ's overhead RFID portals provide a highly accurate means of tracking assets without obstructing the flow of items below or taking up valuable floor space.

With two antennas that can be positioned as required, our overhead RFID portals are particularly ideal for tracking cages and yorks. Fully integrated and extremely easy to install, they are a crucial component in tracking not only cage location but also their usage and movement.

Through an in-built traffic light system, any incorrect items are detected in real time by means of a colour change in the panel above or by adding an optional floodlight that throws an unmissable warning light onto the floor area below.
